

Nekuda.

**Your business has a point.
Manual work isn't it.**

nekudasolutions.com

Your margin is trapped in manual work.

Every new customer should make you more money. Instead, a growing share of your revenue disappears into the manual work of running the business, before you deliver a thing. It is invisible, it compounds as you grow, and you have started to accept it as the cost of doing business. It isn't.

Work that repeats

The same reports, re-keying, reconciliations — every week, forever.

Revenue that leaks

Errors, missed follow-ups and denials quietly bleeding 6–8% of revenue.

Headcount that only grows

Every new customer means more coordinators, not more margin.

Every handoff is a point where the work stops moving.

BY HAND

WITH NEKUDA

Illustrative – your numbers come from the Audit.

Industry benchmarks for manual back-office work.

45-60% **6-8%**

Cut in back-office operating cost with AI.

Of revenue lost to preventable errors and denials.

1/3

Of gross profit spent on administrative coordination.

<6 mo

To payback on a typical build.

Published industry benchmarks, not client results.

We don't sell you software. We rebuild the work.

We go in, map the manual work, and rebuild the highest-cost workflows as custom AI that runs in your live operation. Not a pilot. Not a slide deck. Production systems your team uses on Monday.

Governed, not vibe-coded

Real authentication, data isolation, audit trails. HIPAA-grade under a BAA where needed.

In your live operation

Integrated with your systems, deployed in weeks.

Priced on outcomes

We quantify the return first and price against the savings — never hourly.

Three steps. The first one pays for itself.

01

Savings Audit

Fixed fee · 30-60 days

A savings map, one automation live on your real data, and a board-ready number. The fee credits toward the build.

02

Automation Build

Outcome-priced · from ~\$150K

Your top 2-3 workflows into production, your team trained, measured against a defined target.

03

Managed Automation

Monthly

Hosted, monitored, improved. The operation gets leaner every quarter.

What the Savings Audit delivers.

WHAT YOU LEAVE WITH

- A savings map of your manual work
- One working automation in production
- A board-ready number
- A straight answer

TIMELINE

What a build actually returns.

Back-office labor today	\$1,500,000 / yr
Revenue lost to errors and denials	\$1,000,000 / yr
Labor cost removed (45–60%)	+\$675,000–900,000
Revenue recovered (40–50% of the leak)	+\$400,000–500,000
Less build and first-year managed cost	–\$375,000–425,000

ILLUSTRATIVE NET, YEAR ONE

\$700K–\$975K.

Illustrative model built from published industry benchmarks. Not a delivered client result and not a guarantee.

Numbers from the build record.

Systems this team built are used by Fortune 500 companies, including Berkshire and AmWins.

75%

Faster patient intake
Healthcare operations

85%

Fewer errors
Home health & therapy

50%

Faster stop-loss quotes
Insurance operations

80%

Faster rehab scheduling
Post-acute care

93%

Fewer shipping errors
At-home diagnostics

99%

Shift-report completion
Assisted living

Real results from production systems built by this team, before Nekuda carried the name.
Client names withheld; stories available on request.

Built by the person who builds the platform.

Before Nekuda, the founder spent eight years building and bootstrapping a profitable software platform where hundreds of paying businesses — many in regulated healthcare — run their operations, with tens of thousands of apps built on it. Builds run on that same governed infrastructure: role-based access control, encryption at rest, audit logging, and a HIPAA edition backed by signed BAAs. That is why deployment is measured in weeks instead of quarters.

We build, we don't advise

Governance is not an add-on

We bring our own platform

We stake the fee to the outcome

Healthcare operations · Logistics · Field service · Finance ops · Insurance

We started in healthcare; the playbook carries.

Every skill it takes. One team. One point.

The people who build AI, ship software, and have run operations — working as a single unit on your business.

Nekuda gets you to **the point.**

You started your company for a reason.
That reason is the point.

Every handoff where work sits still is a
point where your operation stops.

We remove the points where your work
stops. You get your business back to
the point.

See what your manual work is really costing you.

Give us the one process that wastes the most of your team's time. In 30–60 days we'll hand you a working automation that eliminates it, and the number to prove what it's worth. One less point where the work stops.
